The volume of stock trading literature both published and in internet sources is enormous and is going to grow day by day. Along with the augmentation of the money flow, along with the increase of computers capacities, along with the complication of financial instruments the trading technology becomes more intricate. And this fact, of course, is comprehended by traders-writers and is reflected in books and sites.

Not pretending on completeness I give the list of sources of reference that I have processed searching for the Holy Grail. Something of that I just read, for example «Reminiscences of a stock operator» of E. Lefevre; something I studied thoroughly, for example the books of Mr. Elder; I took notes of something very important, for example the works of M. Douglas and other authors. Besides, I'm going to publish my notes because I often omitted clear and venial repetitions, some passages that don't refer to the direct sense of narration. It could be more compact material processing.

I would like to divide all mentioned books in two parts: f **or beginners** and **for advanced readers** .
Without studying books for beginners one shouldn't proceed to trade. The rest is not obligatory to be read if in a year of independent trading you observe the growth of a yield curve. However, it's worth to return to this list if you have an adverse balance for the last two-three months or that is more probably during your initial period - your nonrecurrent loss more than 20% of the trading account.

It is desirable to take into account that the most part of mentioned books are primary published in the 20th century. It is not that these books are out of date – no. Trade deals essentially with psychology and only marginally is connected to technique and human psychology is changeless in our short life. Life changes as a whole and markets also change. New financial instruments appear, we can observe flows and flows out of liquidity, the list of participants change. For the last two years stock cycles are accelerated, trade is robotized, a great attention is paid to intraday trading. Unfortunately, **books that take into account the last tendencies**
are in English and not numerous. However, they continue to be published and I will complete and improve the list as possible. Have a good and useful time while reading, dear friends!
